STATE TELEPHONE BUSINESS SHOWS BIG INCREASE The new telephone directories were distributed in Norwich Monday. There

Facts obtained from the telephone company show conclusively that the eight people are using their one telephone to a wonderful extent, for more than 222,000,000 telephone calls were handled at the central offices of the company during the year.

Included in the 222,000,000 calls are 8,000,000 toll line calls, which shows that a tremendous amount of interstate and intrastate business is being transacted among manufacturers and merchants. About 160,000 telephones were used in passing this gigantic mass of conversation.

To carry these millions of conversation, the Southern New England Telephone company uses about 500,000 miles of outside telephone wire. If the mileage of wire in the central offices was included the figure would be much greater. Traversing the highways and the byways and reaching into every nook and corner of every town, villings and hamlet, the half million miles of copper strand is all located within the 4800 square miles of Connecticut.

inge and hamlet, the half million miles of copper strand is all located within the 4800 square miles of Connecticut. If anyone tried to count all the telephone poles the Southern New England Telephone company has as he travels on the trains, he would sleep long and many times before the job was finished, for there are 250,000 of them. There are more than 250,000 miles of the company's wire in cables winding their coppery way through conduits beneath city streets and state highways and above them on poles. About 85 per cent. of the company's cent. of the company's wire in cables are in cables, aerial and underground, so that the company is not, in fact, cluttering up the skyline with its wires.
